

morphle

MORPHOLENS 240

the High Throughput Scanner

Fast Scanning with Batch Loading

100 slides in 120 mins
240 slides per load

Robust Hardware & Consistent Quality

Under 0.1 % rescan rate
LIMS integrated

www.morphlelabs.com

Designed for **high volume** labs with aggressive TAT goals

Continuous loading
for the busy Histotech

Slide carriers are inserted incrementally as and when the slides are made ready!

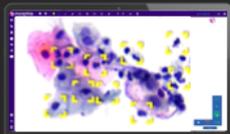

~0% scan rejections
Eliminates QC for PAs

AI-powered adaptive scanning algorithms deliver auto-QCed perfect scans, always!

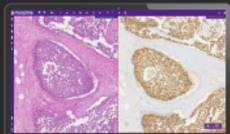

LBC based

Pap smears,
CSF, Urine

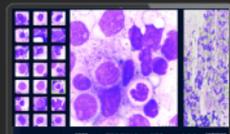

FFPE based

H&E, IHCs,
Special stains

Smear based

BM Aspirates
FNACs, Pap

Versatility means High Returns

Technical Specifications

Slide Racks

Lock load & walk away

- 240 slide batch at once
- 40 carriers with 6 slides per carrier
- Supports continuous loading

Slides types

Versatility to the rescue

- Slides with / without coverslips / non-dried
- Slide thickness from 0.8 to 2mm
- Slide shapes 1"x3", 2"x3" & 3"x3"

Time for 15x15mm

Speed, a logical constraint

- 70 secs with flash mode with 3 focus points
- 150 secs with dense focus map & AI repair
- 7.5 mins with 7 Z-Stacks 1 um apart
- 15 secs fast preview with live mode

Optics & Camera

Preserving ground truth

- 0.22 microns / pixel @ 40x with primary camera
- Secondary Preview Camera for macro imaging
- High power flash LED with custom condenser

Barcode support

Traceability is a must

- All types supported including
- Linear type, example: CODE 39, CODE 128
 - Matrix, example : QR code, PDF417

LIMS Integration

A complete Workflow

Custom development for bi-directional integration is included as part of installation

Data size

Data is gold & size matters

450 MBs for a WSI of 15x15mm
For Z-stack data size, it gets multiplied by a factor of the number of stacks

Image Storage

IT is painful. We solved it.

Local : RAID 6 NAS-based chained storage
Cloud : Cold storage on Amazon Web Services @ 10 cents per slide per year

Physical Properties

Compact enough

Base : 31 x 28 inches
Height : 30 inches
Weight : 100 Kg (220 lb)

Visit morphlelabs.com for product videos

Data storage & Cost

Cloud Storage

Stored on a replicated HIPAA compliant cloud from tier 1 providers like Amazon Web Services, Google Cloud Storage, etc

As inexpensive as 4 rupees per slide per year with cold storage mode on AWS

Cost scales gracefully with every slide in a fully automated manner

Lag-free uploads with 40 Mbps or nightly upload mechanism works with 12 hour lag but with half the bandwidth

Local Storage

Storage on Network attached storage (NAS) drives backed by RAID architecture within the premises

Costs ~30% lower than cloud storage but adds IT maintenance

Storage scales in steps of 20-100 TBs and needs intervention from IT team

Internal Network transfer from scanner to NAS irrespective of internet availability

Image Access & User Management

Ease of Access

100% **web based** image viewer. No need to download any software.

Works well with google chrome on laptops & iPads alike.

User Management

Un-limited user login creations. Our software is free with no strings. Role Based **Access control** with a self-serve interface for scan level **permission** management.

Internet needs for Access

Lag-free navigation @ 8Mbps. Works well even with a mobile data Viewer works in **streaming mode** consuming under 50MB data during 1 min fast browsing

The Complete Workflow

1

Scanning

Barcoded samples are scanned by the **lab technician** & auto-ingested into the image management system

2

Auto-QC

Pathology assistant reviews **auto-QCed** scans & flags slides for pre-analytical defects if any

3

Case Assignment

Lab manager assigns QCed okay cases to pathologists & maintains queue for each pathologist

4

Notifications

Pathologist receives **email notification** with links to cases to be reported at configurable intervals

5

Diagnosis

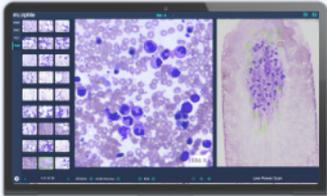

Remote Pathologist makes the diagnosis based on scans & integrated **patient data** from LIMS

6

Reporting

Pathologist edits pre-populated **reporting templates** & either signs off the cases or requests extra stains

Solving Cytology High Speed Speciality Scanning

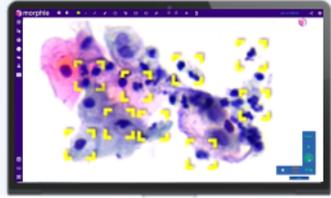

BMA with Cell Locating

5 min from slide insertion to a ready-to-view scan with bucked viable cells

Auto-area selection of viable cell trails around particles at low power

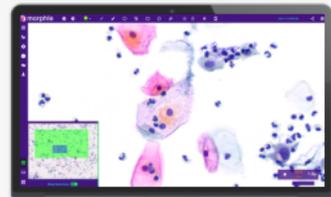

Z-Stack for every field at 40x for thick regions

Cytology with Z-Stacking

Move across multiple Z-levels at each field using mouse scroll just like a fine focus knob on the microscope

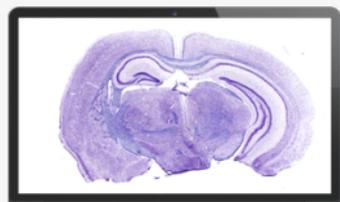

Under 8 mins for 7+ layers of Z-Stack

Screened area tracking

Preview paints the visited region allowing protocol based verification

Special Needs Innovative solutions

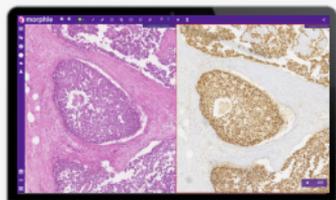

2"x3" & beyond Large slide formats

6x8", 4x6", 2x3"
slide formats supported
with special trays

The standard 240 slide
loader can load 80
slides of 2x3" at once

Custom stains can be
calibrated

Digital multiplexing

Compare H&E &
multiple IHC scans side
by side.

Upto 12 scans can be
arranged in grid style
on larger screens.

Easy adjustment in
synchronisation for
not-so-serial sections

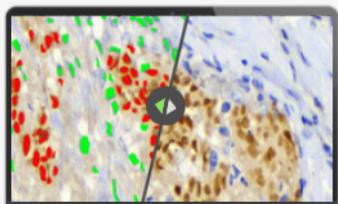

Frozen section Rapid On Site Eval

Live mode offer WSI
Preview in 15 secs +
live Z-Stack at 40x

Unlock the advantage

Artificial Intelligence

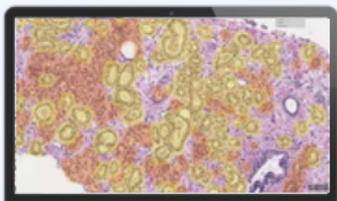

IHC Quantification

Automated cell counting for nuclear stains spits out positivity ratio in few seconds for the demarcated tumour area

Tumor region selection interface helps avoid the compounding factors

Research use only

Auto-demarcated Gleason Scoring

DeepDx[®] Prostate Pro application analyses Whole Slide Images of H&E stained prostate core needle biopsies and automatically classifies the histological severity of prostate cancer.

Its fully integrated within the image viewer with instantly switchable overlays.

Tools for Research

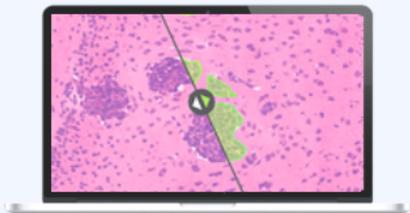

Automation and Objectivity

Hassle-free Morphometric Analysis

Calculate tumor margins. Allows setting up orthogonal references.

Precise to micron measurement for nuclear & cytoplasm boundaries

Pixel flow tool for Smart annotations

One click area tracing with real time smart image analysis

Allows precise measurement of area & exporting data of boundary as CSV

Customised AI workflows & Software Tools

Every research problem is different and often needs efficient software.

We enjoy building novel research tools in collaboration with promising researchers.

Options for every use-case

Hemolens 6

6 slides at once

Dual Obj
100x Oil & 40x

Meant for digital microscopy for PBS, BMA, CSF, Urine & other applications demanding 100X

Morpholens 240

240 Slide batch

Meant for high volumes labs with Histopath, IHCs & Cytopath. Integrated workflows & image storage

Morpholens 6

6 slide batch

All the goodness of packed with a smaller batch size. Optimum for scanning upto 100 slides a day.

Morpholens 1

Single slide batch

40x / 20x Objective with crisp digital zoom upto 80x

Tiny footprint & surprisingly affordable. Perfect for turnkey projects.

Plug & Play Hardware | 24x7 Support | Risk Free Returns

Morphle has managed to solve even the not-so-obvious issues of digital pathology - viewer lags, fragmented LIS integration, and bloated data storage. It even tackles minor yet critical issues such as scanning slides with wet coverslips for urgent reporting.
