MORPHOLENS 6

Fastest.. Small Footprint Slide Scanner

Versatility means High Returns

Workflows perfected for
H&E / IHC + LBC + FNAC

Smarter Hardware for Consistent Quality

Under 0.1% re-scan rate
with AI driven auto-QC

www.morphlelabs.com

Technical Specifications

Slide Rack

Lock, load & walk away

6 slides batched at once
with walkaway experience

Slide Types

Versatility to the rescue

- Slides with / without / non-dried coverslips
- Slide thickness from 0.8 to 2mm
- Slide shapes 1"x3" & 2"x3"

Time for 15x15mm

Speed, a logical constraint

- 70 secs with flash mode with 3 focus points
- 180 secs with dense focus map & AI repair
- 7.5 mins with 7 Z-Stacks 1 um apart
- 15 secs fast preview with live mode

Optics & Camera

Preserving ground truth

- 0.22 microns / pixel @ 40x with primary camera
- Secondary Preview Camera for macro imaging
- High power flash LED with custom condenser

Barcode Support

Traceability is a must

- All types supported including
- Linear type, example: CODE 39, CODE 128
 - Matrix, example : QR code, PDF417

LIMS Integration

A complete Workflow

Custom development for bi-directional integration is included as part of installation

Data Size

Data is gold & size matters

450 MBs in lossless archive mode and 850 MBs within hot storage for a WSI of 15x15mm.
For Z-stack data size, it gets multiplied by a factor of the number of stacks

Image Storage

IT is painful. We solved it.

2000-3000 scans are stored in a primary hard disk and auto-rolled out to Local / Cloud archival based on retention time for hot storage.
Local: RAID 6 NAS-based chained storage
Cloud: Cold storage on Amazon Web Services @ 10 cents per slide per year

Physical Properties

Compact enough

Base: 16 x 18 inches
Height: 14 inches
Weight: 26 Kg (57 lb)

Data storage & Cost

Cloud Storage

Stored on a replicated HIPAA compliant cloud from tier 1 providers like Amazon Web Services, Google Cloud Storage, etc

As inexpensive as 4 rupees per slide per year with cold storage mode on AWS

Cost scales gracefully with every slide in a fully automated manner

Lag-free uploads with 40 Mbps or nightly upload mechanism works with 12 hour lag but with half the bandwidth

Local Storage

Storage on Network attached storage (NAS) drives backed by RAID architecture within the premises

Costs ~30% lower than cloud storage but adds IT maintenance

Storage scales in steps of 20-100 TBs and needs intervention from IT team

Internal Network transfer from scanner to NAS irrespective of internet availability

Image Access & User Management

Ease of Access

100% **web based** image viewer. No need to download any software.

Works well with google chrome on laptops & iPads alike.

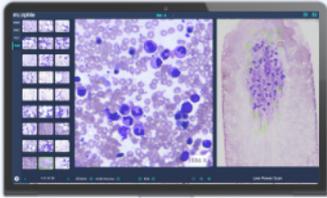

User Management

Unlimited user login creations. Our software is free with no strings. Role Based **Access control** with a self-serve interface for scan level **permission** management.

Internet needs for Access

Lag-free navigation @ 8Mbps. Works well even with a mobile data Viewer works in **streaming mode** consuming under 50MB data during 1 min fast browsing

Solving Cytology High Speed Speciality Scanning

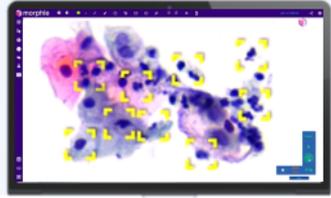

BMA with Cell Locating

5 min from slide insertion to a ready-to-view scan with bucketed viable cells

Auto-area selection of viable cell trails around particles at low power

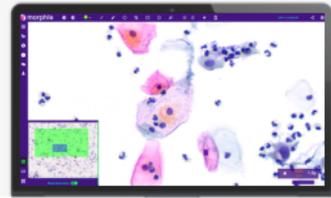

Z-Stack for every field at 40x for thick regions

Cytology with Z-Stacking

Move across multiple Z-levels at each field using mouse scroll just like a fine focus knob on the microscope

Under 8 mins for 7+ layers of Z-Stack

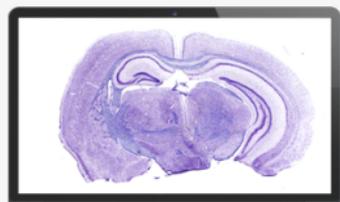

Screened area tracking

Preview paints the visited region allowing protocol based verification

Special Needs

Innovative solutions

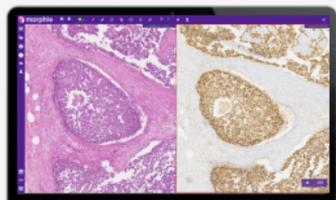

2"x3" & beyond Large slide formats

2x3" slide formats supported with special trays

Instead of standard 6 slides the tray loads 2 slides of 2x3" at once

Custom stains are calibrated on demand

Digital multiplexing

Compare H&E & multiple IHC scans side by side.

Upto 12 scans can be arranged in grid style on larger screens.

Easy adjustment in synchronisation for not-so-serial sections

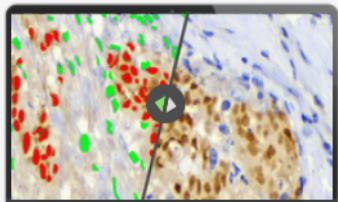

Frozen section Rapid On Site Eval

Live mode offer WSI
Preview in 15 secs +
live Z-Stack at 40x

Unlock the advantage

Artificial Intelligence

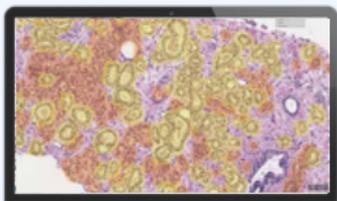

IHC Quantification

Automated cell counting for nuclear stains spits out positivity ratio in few seconds for the demarcated tumour area

Tumor region selection interface helps avoid the compounding factors

Research use only

Auto-demarcated Gleason Scoring

DeepDx® Prostate Pro application analyses Whole Slide Images of H&E stained prostate core needle biopsies and automatically classifies the histological severity of prostate cancer.

Its fully integrated within the image viewer with instantly switchable overlays.

Tools for Research

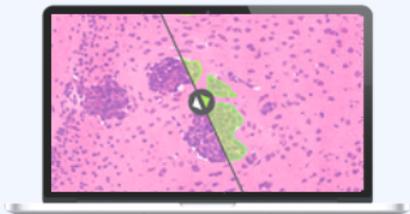

Automation and Objectivity

Hassle-free Morphometric Analysis

Calculate tumor margins. Allows setting up orthogonal references.

Precise to micron measurement for nuclear & cytoplasm boundaries

Pixel flow tool for Smart annotations

One click area tracing with real time smart image analysis

Allows precise measurement of area & exporting data of boundary as CSV

Customised AI workflows & Software Tools

Every research problem is different and often needs efficient software.

We enjoy building novel research tools in collaboration with promising researchers.

Morpholens 1

Single slide batch	240 Slide batch	6 slide batch	Single slide batch
Dual Obj 100x Oil & 40x	40x / 20x Objective with crisp digital zoom upto 80x		
Meant for digital microscopy for PBS, BMA, CSF, Urine & other applications demanding 100X	Meant for high volumes labs with Histopath, IHCs & Cytopath. Integrated workflows & image storage	All the goodness of packed with a smaller batch size. Optimum for scanning upto 100 slides a day.	Tiny footprint & surprisingly affordable. Perfect for turnkey projects.

Plug & Play Hardware | 24x7 Support | Risk Free Returns

A Neuberger ASSOCIATE

Morphle has managed to solve even the not-so-obvious issues of digital pathology - viewer lags, fragmented LIS integration, and bloated data storage. It even tackles minor yet critical issues such as scanning slides with wet coverslips for urgent reporting.

Dr. Jayaram - Bangalore

With active support from team Morphle CPA was able to setup effective tele-reporting at our hospital sites for blood smears, CSF & more. CLIA validation baked into the workflow & IT setup for remote access within hospital network was a true delight for us.
