Kokilaben Dhirubhai Ambani Hospital & Research Institute

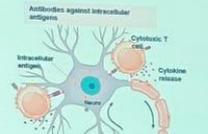

Autoimmune (antibody mediated) encephalitis

Antibodies against neuronal surface/synaptic proteins

- NMDAR, VGKC: LGI1 and Caspr2, MOG, GABA_AR, GABA_BR
- The antibodies reach their target and directly pathogenic.
- Typically, treatment responsive.

Antibodies against intracellular antigens

- Hi, Ri, Yo, MaT2, SAE65, amphiphysin
- The antibodies are not directly pathogenic. Exert their effects via cytotoxic T cell mediated responses.
- Typically, treatment resistant.

Figure 3 | Types of causal antibodies. Adapted from Yong et al., *Neurologist*, 2012, 17(3):44. Created with preprints.
